

Please amend the application as follows:

In the Claims

Please cancel Claim 26.

Please amend Claims 1-3, 7, 17, and 22- 25. Amendments to the claims are indicated in the attached "Marked Up Version of Amendments" (pages i - iv).

- See S-1*
- R1
Amend*
1. (Amended Four Times) A docking system for a wireless telephone comprising:
a display housing having a plurality of control elements and a connection port that electrically connects a display circuit within the display housing to a handheld wireless telephone housing docked with the display housing such that image data received by the wireless telephone is transmitted to the display circuit, the display housing having a docking surface on which the handheld wireless telephone housing is mounted;
an active matrix liquid crystal display mounted to the display housing and connected to the display circuit, the display circuit generating display data presented on the liquid crystal display as an image;
a light source positioned in the display housing to illuminate the image;
a lens in the display housing positioned to receive the image presented on the active matrix liquid crystal display such that the lens magnifies the image; and
a power management circuit that controls the power consumption of the display circuit such that after the image is illuminated, the power management circuit lowers the power consumption of the display circuit until the next image is ready to be presented on the liquid crystal display.
2. (Twice Amended) The system of Claim 1 wherein the liquid crystal display includes an array of at least 320 x 240 pixel electrodes.
- R2
Amend.*
3. (Twice Amended) The system of Claim 1 wherein the liquid crystal display includes an array of at least 640 x 480 pixel electrodes.

- Sub J2*
7. (Amended four times) A docking system for a handheld wireless telephone comprising:
a handheld housing having a plurality of control elements and a connection port that electrically connects a display circuit within the housing to the handheld wireless telephone docked with the housing, the handheld housing having a docking surface on which the handheld wireless telephone is mounted;
a display subhousing carried by the housing and moveable between a storage position and an operating position;
an active matrix liquid crystal display mounted to the display subhousing, the display being connected to the display circuit in the housing, the display circuit receiving image data from the wireless telephone, generating display data from the image data, and presenting the display data on the liquid crystal display as an image;
E3 CMC
a light emitting diode light source positioned in the display subhousing to illuminate the image;
a lens carried by the display subhousing and positioned to magnify the image presented on the active matrix liquid crystal display; and
a power management circuit that controls the power consumption of the display circuit such that after the image is illuminated, the power management circuit lowers the power consumption of the display circuit until the next image is ready to be presented on the liquid crystal display.

- Sub J5*
17. (Amended four times) A docking system for a handheld wireless telephone comprising:
a housing having a plurality of control elements and a connector port that electrically connects a display circuit within the housing to a handheld wireless telephone docked with the housing, the housing having a docking surface on which the handheld wireless telephone is mounted;
a display subhousing module movable from a storage position to an operating position relative to the housing;
an active matrix liquid crystal display mounted to the display subhousing, the display being connected to the display circuit such that image data received by the
- E4 CMX*

wireless telephone is transmitted to the display circuit which generates display data from the image data and presents the display data on the liquid crystal display as an image;

a light emitting diode light source positioned in the display subhousing to illuminate the image;

a lens in the display subhousing positioned to receive the image presented on the active matrix liquid crystal display such and that the lens magnifies the image;

*E4
K5
Cmpl.*
a power management circuit that controls the power consumption of the display circuit such that after the image is illuminated, the power management circuit lowers the power consumption of the display circuit until the next image is ready to be presented on the liquid crystal display; and

a battery carried in the housing for powering the display circuit, the power management circuit, and the display.

Sub JH
22. (Thrice Amended) A method of displaying an image on a docking system in conjunction with a wireless telephone, comprising:

electrically connecting a wireless telephone with a docking surface of a docking station such that a display circuit in the docking station receives image data from a transceiver of the wireless telephone capable of receiving audio and image data, the wireless telephone being attached to the docking station at a connection port of the docking station; and

*K5
Cmpl.*
operating the display circuit connected to the transceiver and an active matrix liquid crystal display to generate display data from the image data and present the display data as an image on the liquid crystal display;

illuminating the image with a light source; and

operating a power management circuit that controls the power consumption of the display circuit such that after the image is illuminated, the power management circuit lowers the power consumption of the display circuit until the next image is ready to be presented on the liquid crystal display.

23. (Amended) The method of displaying an image on a docking station as in Claim 22 further comprising powering the docking station and wireless telephone with a battery carried by the docking station.
24. (Amended) The method of displaying an image on a docking station as in Claim 22 further comprising providing a camera to provide imaging capability.
25. (Amended) The method of displaying an image on a docking station as in Claim 24 further comprising selecting whether the image the camera is seen on the display, transmitted to a remote location, or both.

Please add new claim 29.

29. (New) A docking system for a wireless telephone comprising:
a housing having a display circuit within the housing that electrically connects to a handheld wireless telephone docked with the housing;
an active matrix liquid crystal display mounted to the housing and connected to the display circuit such that image data received by the wireless telephone is transmitted to the display circuit which generates display data from the image data and presents the display data on the liquid crystal display as an image;
a light source positioned in the display housing to illuminate the image; and
a power management circuit that controls the power consumption of the display circuit such that after the image is illuminated, the power management circuit lowers the power consumption of the display circuit until the next image is ready to be presented on the liquid crystal display.
